ABOUT ME

I help organizations make sense of their data and keep their technology running smoothly. At St. Anne Mission Hospital, I turn hospital records into clear reports that support decision-making, and I keep the hospital's computers, network, and IT equipment working reliably. Outside of the hospital, I build custom software and dashboards for small businesses — tools that help owners see their sales, stock, and finances clearly and make better decisions faster.

WHAT I BRING

- Reporting: I turn raw records and spreadsheets into simple dashboards and reports that non-technical people can act on.
- IT support: I manage computers, networks, and equipment so that day-to-day operations don't stop.
- Custom business tools: I build software that automates manual, error-prone paperwork — for example, tracking stock, sales, and payments.
- Training and support: I teach staff and clients how to use the tools I build, so the benefit outlasts my involvement.

WORK EXPERIENCE

Internship — *St. Anne Mission Hospital* **Feb 2026 – Present**

- Prepare reports that help hospital management understand what is happening across departments, checking the underlying data for accuracy first.
- Build simple, visual dashboards so departments can see their own performance at a glance instead of reading raw spreadsheets.
- Keep the hospital's computers, network, and information systems running, and provide day-to-day technical support to staff.
- Maintain an up-to-date record of all IT equipment the hospital owns, including where it is and who is using it.
- Support Renal department with keeping patient records organized and helping with department reporting.

Freelance Data Analyst & BI Developer **Jan 2025 – Present**

- Build dashboards and automated reports for clients in different industries, replacing manual spreadsheet work with tools that update and report on their own.
- Take messy, disorganized client data and turn it into clean, trustworthy figures leaders can rely on.
- Run and maintain a public website showcasing this work, and train clients on basic computer and data skills.

IT Assistant (Attachment) — *Kinoro Tea Factory* **May 2024 – Jul 2024**

- Reviewed transport and farmer-delivery data to help managers plan operations more efficiently.
- Assisted with sustainability and compliance reporting, and maintained the factory's Excel-based reporting system.

- Provided general IT troubleshooting and support to staff.

NOTABLE SYSTEMS I'VE BUILT

Pharmacy Management System
Stock management system built for a pharmacy which sells the soonest-to-expire stock first to cut down on wasted, out-of-date medicine, keeps a secure and accurate financial record of every sale, limits what each staff member can see or change based on their role, and includes a built-in assistant to help staff use it. It runs as a simple installed program on Windows.

Small Business Management Systems
An all-in-one system for a small business that tracks production, works out the true costs and produces reports automatically

Other Projects
Dashboards for healthcare, retail, finance, education, and NGO clients; a tool that checks medical bills against official government price lists to flag overcharges; and internal tools for hospital IT asset tracking.

SKILLS AT A GLANCE

- Artificial intelligence: Using AI tools to speed up workflows, such as software development, documentations etc.
- Business Intelligence & Reporting: Power BI, Excel, dashboards, KPI reporting, data cleaning
- IT & Infrastructure: network administration, hardware support, ICT asset management, system administration
- Software Development: building custom business applications (websites, desktop programs and databases)

EDUCATION

Bachelor of Business Information Technology (BBIT) **October 2025**
Kirinyaga University

LANGUAGES

English, Swahili, Kimeru
